Professional Experience

Forestry Technician - GS4

U.S. Forest Service - Missoula Ranger District, Lolo National Forest, MT

04/17/22 - 10/21/22 - GS4

05/11/21 - 11/05/21 - GS4

05/12/20 - 10/25/20 - GS3

05/18/19 - 10/23/19 - GS3

40+ hours per week

Supervisor: Greg Anderson, Supervisory Fire Engine Operator - Missoula Ranger District (406) 829-7000
OK to contact supervisor

For the 2022 season I spent 5 weeks with the Lolo Interagency Hotshots, completing critical training and a two week assignment with the crew. While on assignment in Region 3, Lolo IHC was part of a surge team with two additional hotshot crews, moving to three different fires in New Mexico and Arizona. I spent a subsequent week with Lolo IHC but returned to my home district before they were mobilized for another assignment. Criticals involved line digging, two workouts a day (hiking, running, or circuit workouts), medical training, orienteering, leadership training, aviation training, and standard operating procedures.

As a qualified Firefighter 1 (FFT1) and Incident Commander Type 5 (ICT5) with the Missoula Ranger

District my responsibilities for wildland fires and prescribed burns both on district and out of region included:

- As the seasonal employee with the most seniority and time on district, I acted as a bridge between seasonal and permanent employees, mentored and set the tone for newer crew members, demonstrated quantity and quality of the work expected, and supervised seasonals during PT, project work, etc.
- As module leader, responsibilities included briefing and leading squads of 3-7 firefighters performing suppression/management duties on initial attack or extended attack on fires, on thinning projects, and prescribed burns
- Assisted the Cache Manager in inventorying, distributing, and tracking cache items to seasonal employees
- Assisted the Saw Boss in chainsaw repairs, winterization, saw part tracking, etc
- Acting as Lookout on wildfires and prescribed burns, collecting fire behavior and fire weather data, and relaying it over the radio
- Being point of contact for type 1, 2 and 3 helicopters on wildfires, managing bucket drops, sling loads, personnel safety, and safely building sling loads
- Felling trees and snags as an intermediate sawyer while on fires, when prepping prescribed burn units, and during project work. Supervising newer sawyers operating chainsaws
- Constructing fire line and supervising crew members to construct fire line (direct and indirect) by moving dirt, cutting brush, felling trees by using hand tools or power equipment (Pulaskis, McLeods, shovels, hoes, power tools such as chainsaws, etc)
- Patrolling fire areas to search for and suppress or manage burning materials or hot spots by moving dirt, using water in hose or backpack pumps, cutting brush, felling trees, and various hand tools (Pulaskis, McLeods, shovels, hoes, power tools such as chainsaws, etc), suppressing/managing the fire by using power saws, to control spreading wildland fire until relieved or fire is suppressed
- Operating and supervising crew members in using specialized fire suppression equipment such as portable pumps (volume and pressure pumps) or drip torches, blivets
- Firing and holding operations, setting back burns during initial, extended attack, and prescribed burns, as well as supervising newer crew members' lighting
- Cloning and hand programming DPH and KNG radios, both mobiles and portables
- Use of maps and GPS systems such as Avenza and Gaia, topographic maps and compasses
- Worked and supervised crew members to clean, recondition, and store specialized fire tools and equipment
- Maintaining personal preparedness for initial attack
- Maintaining preparedness for initial attack on two Type 6 and one Type 4 engine modules through regular inventory checks, daily engine checks, and monthly PM checks. Using and overseeing the proper use of type 6 and type 4 engine pumps, monitoring water use, drafting, and maintenance, as well as monitoring other crew members' preparedness
- Driving a type 6 fire engine and positioning it for safe and efficient operations, mobile or stationary engine attack
- Locating quality water sources, improving sump sites for drafting and pumping, managing water sources in wilderness areas or for protected species
- Overseeing the set up and use of volume and pressure pumps used on wildfires, prescribed burn

operations, and training scenarios, adjusting pressure and valves

- Laying hose and supervising crew members in hose lay operations (progressive, simple, and parallel hose lays, quick attack hose packs), using correct fittings, valves, and nozzles for wildfires, prescribed burns, and training scenarios
- Observing, recording, and preserving evidence of cause of fires
- Completing administrative responsibilities such as Crew Time Reports, General Messages, Crew Member Evaluations, CAIs during assignments
- Fuels management work on large-scale thinning projects with limbing, bucking, slashing, lop and scatter, falling, snagging, sawing fuel breaks, and hand piling between 200-400 acres a year
- Other duties included other resource management tasks such as fuels management, prevention activities, recreation management
- Following a physical training routine both at work and on personal time including hiking, trail running, and weightlifting

AmeriCorps Disaster Response Team - Crew Leader & Assessments Lead

Utah Conservation Corps / AmeriCorps - North Carolina Disaster Response

12/01/18 - 02/01/19

40+ hours per week

Supervisor: Kenny Henager - Americorps Disaster Response Team Coordinator (435) 881-6734

OK to contact supervisor

AmeriCorps Disaster Response teams (A-DRT) are emergency management teams which use the National Incident Management System (NIMS) to provide critical services after natural disasters, deploying rapidly and serving under extreme conditions with little pre-existing infrastructure. After Hurricane Florence hit North Carolina in 2018, our primary work was to provide emergency home repairs in high-priority households most affected by winds and flooding. As Crew Leader responsibilities included:

- Oversee a 10 person crew in 2 to 14 day muck and gut projects on flood damaged homes which entailed:
 - Remove water damaged furniture, personal items, and debris from homes
 - Remove carpeting/flooring, subfloors, sheet rock, insulation, and ceilings to leave only studs exposed
 - Seal homes, scrub studs, and apply a multi-step mold suppressant
 - Oversee multi-step decontamination processes for team members and tools
 - Manage personal protective equipment use (Tyvek suits, respirator half masks, etc)
- Assessments to identify priority households (elderly individuals, households without insurance, young children present, living below the poverty line, etc.) with extreme hurricane damage
- Emergency roof tarping and hazard tree removal
- Fostered positive mental health conditions, provide emotional support and a positive work environment for our 10 crew members directly, as well as for interactions with hurricane survivors

During the second half of our 2 month deployment, I joined the Incident Command Team as Assessment Lead and Volunteer Manager. As Assessment Lead, responsibilities included:

- Plan and oversee the work of strike teams on muck and gut projects

- Update Incident Action Plans (IAPs)
- Project priority triage and database management (such as Crisis Cleanup)
- Canvas for homeowners in need
- Complete home and survivor assessments
- Coordinate long-term recovery by creating and teaching a two day community volunteer course (1/3 in classroom setting and 2/3 with in-field muck and gut, mold suppression training in affected homes)

Utah Conservation Corps Crew Leader

Utah Conservation Corps - Moab, UT

05/18/18 - 11/17/18

40+ hours per week

Supervisor: Jake Deslauriers - Utah Conservations Corps Regional Coordinator (207) 256-7502

OK to contact supervisor

After a 3 month term as a Crew Member with the Utah Conservation Corps (UCC), I accepted a Crew Leader role for the following 4 months. As such I provided in-field leadership to a 4-8 person crew during 9 day backcountry projects. Our primary projects were fuels reduction and invasive tree and brush removal. Other projects involved, riparian habitat restoration, trail construction and improvement, fence building, and unit surveying. Responsibilities included:

- Provided project pre and post thinning data by doing fuels inventory, mapping, sample collections, and communicating the progress to UCC staff and project partners
- Managed the supply and equipment needs for a squad for 9 day backcountry projects, including equipment, hand and power tools, saw fuel and bar oil, truck fuel, supplies, and food and water
- Spent 800+ hours throughout the season on limbing, bucking, lop and scatter, falling trees, hand piling, and chipping on units, as well as supervising the same tasks for crewmembers
- Maintained safe herbicide decontamination protocols and followed strict herbicide prescriptions for invasive tree and bush species removal
- Completed assigned documentation including: weekly project progress reports, vehicle inspections, daily safety logs, incident reports, crew member evaluations, and debriefing notes
- Followed UCC protocols and safety procedures for operating hand tools, power tools, driving, and backcountry operations
- Safely traveled to project site, and established safe and clean camps
- Provided in-field training and direction on chainsaw use, hand tool use, herbicide management to crew members
- Facilitated positive crew dynamics and crew member development, resolved conflicts, and if necessary document incidents violating UCC policies
- As a Wilderness First Responder, provided in-field emergency care
- Lead weekly conservation education hours
- Extensively volunteered during my free time to complete chainsaw maintenance and repairs, making and shortening chain, and managed chainsaw fuel cache
- Throughout the season I worked diligently and independently, and was recognized for my positive attitude in the face of harsh desert conditions

As a Crew Member for the UCC, I spent three months assigned to a variety of conservation projects on public lands, mostly fuels reduction and invasive species removal, as well as National Parks Vegetation crew projects and National Parks Trails projects. As a crew member my responsibilities included:

- Proper chainsaw use
- Chainsaw maintenance and basic in-field repairs
- Hand tool use for trail building and improvement (McLeods, various hoes, Pulaski's, rock bars, pickaxes, etc)
- Herbicide treatments and decontamination processes
- Applied basic conservation and land management concepts
- Seed collection, storage, and planting

International Cross-Department Specialist / Onboarding Specialist

MINDBODY, Inc. - San Luis Obispo, CA

Feb 2016 – March 2018

Supervisor: Torsten Jahn (805) 710-3533

In this role within a fast-paced software company, I helped build the International Cross-Department team, which managed customer service, operations, and user experience for French speaking clients using the MINDBODY business management software. This entailed supporting client-facing customer service teams and supporting internal teams' needs with tasks such as:

- Helped hire, train and oversee daily operations for the French technical support team, and managed customer service escalations for all French speaking clients
- Create triage processes for English-speaking employees contacting French speaking clients
- Developed support procedures for French speaking clients in Canada and France, Belgium, Switzerland
- Streamlined billing, merchant processing, data conversions and technical support procedures for French speaking clients, as well as created tracking metrics to assess the effectiveness of those procedures
- Worked with the Marketing department to provide website and advertising copy in French.
- Researched and assessed international legal compliance requirements for the MINDBODY software in Canada and Europe
 - I acted as project manager for MINDBODY's 9-month compliance project of the NF525 accounting software law in France, heading liaisons between internal and outside legal counsel teams, full-stack developers, US and UK customer service employees, project management and product management teams, and a French third-party government-accredited certification entity.

Prior to this position, I worked as an Onboarding Specialist from February 2016 to January 2017. In this role, I managed new French and English clients' initial implementation of the MINDBODY software.
